

Carrier Customer Bulletin

Date of Bulletin: November 9, 2017
Notice #: CCBFTR01455A
Audience: CLEC, Reseller Receiving BDT Files
Subject: Local Billing BDT File Change for 1030XX Records - Update
Date Effective: January 10, 2018

Frontier Communications is providing an updated notification of a BDT file change impacting the 1030XX records of local billing data files.

The FID information, supplied in the 1030XX records of the local billing BDT file, will be modified to supply the Telephone Number (TN), Billing Telephone Number (CKR) and Circuit ID (CLS), if one exists. The chart below provides the current format and the new format of the 1030XX records effective January 10, 2018.

CURRENT FORMAT	NEW FORMAT
When a circuit ID existed: CLS nn.AAAA.nnnnnn..AAAA	When a circuit ID exists: Line 1: TN nnnnnnnnnn/CKR nnnnnnnnnn Line 2: CLS nn.AAAA.nnnnnn..AAAA
When no circuit ID existed: TN nnnnnnnnnn	When no circuit ID exists: Line 1: TN nnnnnnnnnn/CKR nnnnnnnnnn

Frontier is not making any changes to the Circuit Location (CKL) information currently passed on the 1030XX records.

Frontier testing, both internally and with participating CLECs, identified that the change should only require CLECs to make an importing program update if the importing program being used cannot parse out both the Telephone Number and Circuit ID for a single record.

If you have questions regarding the information provided in this notice or would like a test file, please contact your assigned Frontier Wholesale Claims & Collections Representative or email: wholesale.bdt@ftr.com.
