| AAL   | Appointment Availability List- Identifies a list of available appointments when a requested appointment time is not available. | C           | 18           | N             |              |                | Appointment date and appointment time will be provided in concatenated format; Example CCYYMMDD 0800-1200.  
All day availability is displayed without a time value, Example CCYYMMDD. Format includes space and hyphen.  
If the APPRES field is populated then this field will be left blank.  
When a requested APPRD is not available a list of available appointment options will be provided in this field.  
A maximum of four appointment dates and appointment time combinations may be provided.  
User may select an available appointment and resubmit their request. |
| APPTRESID | Appointment Response Identifier- Identifies the appointment response number assigned by the provider to relate associated transactions. | R           | 10           | AN            |              |                | The APPTRESID value will be used to populate the RESID field on the Appointment Scheduling inquiry screen.  
In order to associate the reserved Appointment Schedule date with the Order request, the APPTRESID number must be populated on the associated LSR.  
The Appointment Schedule date is reserved when a valid APPTRESID is returned.  
When an APPTRESID is not provided on response it indicates the requested appointment date has not been reserved. |

### Field Description

**Field Description**: Secondary Network Channel Interface Code. Identifies the electrical conditions on the circuit at secondary ACTL or end user location.

**Field Usage**: C

**Field Length**: 12

**Characteristics**: AN

**Valid Entries**: 

**Edit Usage Notes**: Required if error condition exists, otherwise prohibited.

**Notes**: Identifies a provider specific code on the response transaction that represents what occurred on the associated inquiry transaction. The occurrence of error fields overrides the return of other fields stated in the response.

---

**Field Description**: Provider Response Code. Identifies a provider specific code on the response transaction that represents what occurred on the associated inquiry transaction.

**Field Usage**: C

**Field Length**: 14

**Characteristics**: AN

**Valid Entries**: 

**Edit Usage Notes**: Required if error condition exists, otherwise prohibited. For full list of edits, See Pre-Order Error Code Matrix.

**Notes**: Identifies a provider specific code on the response transaction that represents what occurred on the associated inquiry transaction. The occurrence of error fields overrides the return of other fields stated in the response.

---

**Field Description**: Provider Response Description. Identifies the provider's text used to clarify the response for the associated inquiry transaction.

**Field Usage**: C

**Field Length**: 264

**Characteristics**: AN

**Valid Entries**: & ' * : , $ - # ( ) % . + " ; / space

**Edit Usage Notes**: Optional if PRESPC field is populated, otherwise prohibited.

**Notes**: Identifies the provider's text used to clarify the response for the associated inquiry transaction. Returned with error explanation or non-error related supplemental data. The occurrence of error fields overrides the return of other fields stated in the response.
